

A Day in My Dream World

By: Leliana Frobisher

Welcome to a day in my life in outer space! When I wake up in the morning, I stretch my arms out. My bedroom looks like I am in actual outer space! The walls are black and have a bunch of tiny star stickers on the wall and ceiling. I get dressed, and all my outfits have the planets on them. I leave my house and meet all the real planets at the space park. For breakfast we eat cheese balls. We like to eat cheese balls because they look like suns!

“It’s time to go to school,” I yell! The planets magically shrink down small enough to fit in my pockets. They are so light I barely feel them. My mom and dad get in the car, which drives itself when you speak the directions in the microphone. The car can drive or fly, so we choose to fly fast to school so we aren’t late. The car is faster when we fly. My school is high up in the clouds!

At school, we have show and tell every day! I bring my planets every day and tell what I know about them. I tell about them in order- Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, & Neptune. I even include Pluto, because sometimes the sun has to babysit Pluto. Pluto isn’t a planet anymore, she’s kind of like a baby. I tell my classmates about the biggest planets, the smallest planets, and the hottest and coldest planets. My classmates love learning about the planets! At recess, we play with the planets when they are small and talk to them to learn more.

After school, I take the planets to my Gigi’s house to play on the playground in the backyard. We eat more cheese balls. For dessert we have planet cake! There are 11 seats at the table. 8 seats for the planets and 3 for my family. When it’s time for bed I tuck the planets in bed. Jupiter has the biggest bed, of course. His bed is so big, he has to sleep outside. The other ice and gas giants have to sleep outside too. The sun sleeps in a lava bed. Pluto sleeps in a tiny baby bed. My bed is big enough for the rocky planets. I say goodnight and dream of tomorrow. I love our solar system and the planets! Living in outer space is AMAZING!
